

Automatic

Description

The Automatic Jammer can fill doughnuts and pastries two at a time without mess or waste, making it very economical. Fillings are precisely dispensed through dual nozzles in variable, pre-set amounts. If you want to change fillings half way through a run - just lift the filler unit from the console and replace it with another unit containing the new filling.

This Filler is an ideal way of speeding up production without losing quality or raising costs.

The Jammer and Pastry Filler consists of two assemblies, finished to the highest standards. Firstly, there is the electronic console which is entirely enclosed and self-contained and secondly, the filler unit complete with nozzles, pump mechanism and lid.

The filler's well designed construction ensures easy cleaning and durability. The hopper and filling unit is constructed from clear plastic, allowing the level of the filling to be quickly checked. The steel console base is plastic coated. For convenience, the filler units do not need to be cleaned out daily as long as they are kept more than half full. It is important to note that only seedless jams and fillings can be used.

Features

- Fills doughnuts and pastries, two at a time
- Dispenses accurate pre-set amounts of filling
- Allows accurate costings of fillings
- Eliminates operator inaccuracy
- Easy to clean and simple to operate
- Quick change hoppers with no cleaning required between filling changes

Machine Reference

Reference	Model
FG053	Automatic jammer

Options

- Choice of nozzles available

Dimensions:

Height: (with hopper)	460 mm
Height: (without hopper)	205 mm
Width:	390 mm
Depth: (including tray)	360 mm
Weight: (without filling)	10.5kg
Power:	Single phase connecting cable is supplied with 13A moulded plug and socket.

Capacity:

Hopper capacity:	9.1kg
Single delivery capacity:	9.5g to 907g
