

# TROLLEY SANITISER STATION

## Protect Your Customers & Staff from Trolley Bacteria & Viruses

MONO's highly effective Trolley Sanitiser Station, in partnership with Gwalia Healthcare Ltd and Graco, has been developed in response to a request from one of our leading supermarket customers to develop a customer-operated, automatic misting system for disinfecting and sanitising shopping trolleys.

The Trolley Sanitiser Station is small and compact and fits in an area just 1,485mm wide by 600mm deep. It can also be sited either inside the supermarket itself, eg. in the entrance foyer or outside the premises in any convenient location.

As the Trolley Sanitiser Station has been designed by MONO Equipment, we are able to make modifications to suit customers' specific needs if required. The Station can also be branded to suit

## What the Trolley Sanitiser Station Does:

MONO Equipment's Trolley Sanitiser Station is designed to provide retail customers with a clean, safe and worry-free shopping experience by effectively sanitising and removing bacteria and viruses prior to the trolley being used in store. When used in combination with Hybrisan Surface & Hands solution, the Trolley Sanitiser Station kills a broad spectrum of bacteria and viruses, including Coronavirus, SARS-Cov2, C.Diff.

The Trolley Sanitiser Station can also be used with a range of other sanitiser products.

## How the Trolley Sanitiser Station Works:

The Trolley Sanitiser Station has been designed to be Customer-Operated, thereby removing the cost of having to employ dedicated members of staff to man sanitising stations whilst the supermarket is open.

The customer simply pushes their trolley in to Entry side of the Sanitiser Station and a sensor automatically starts the sanitising process via the 4 misting nozzles.

The customer then walks around the side of the Sanitiser Station where they sanitise their hands using the no-touch, automatic hand-gel dispenser.

The customer then removes their clean, safe, sanitised trolley from the Exit side of the Trolley Sanitiser Station and enters the supermarket.

The Trolley Sanitiser Station pays particular attention to the high-touch points, leaving a small residue of moisture which builds up residual protection over time.

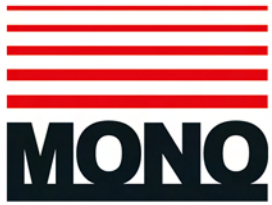

## Hybrisan Surface & Hands Sanitiser - Kills 99.999% & 100% Alcohol Free

Hybrisan Surface & Hands is a safe, non-hazardous, environmentally-friendly, complex polymeric biocide solution which kills 99.999% of bacteria (BS EN1276:2019) and enveloped viruses including SARS-COV2 (BS EN 14476:2013 + A2:2019).

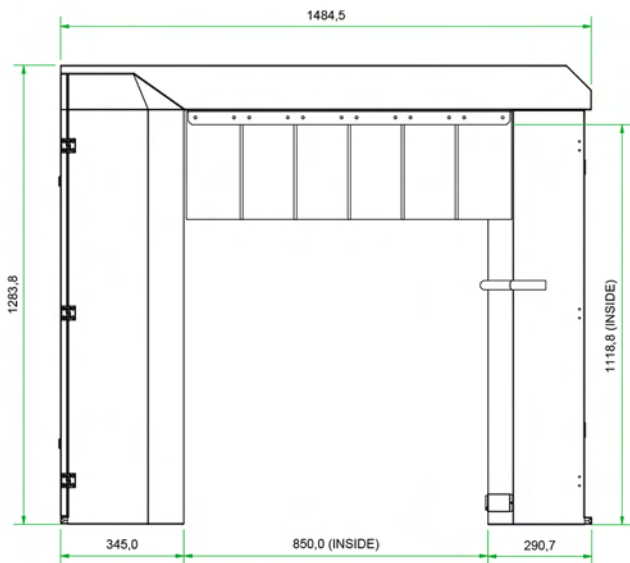

The solution can be safely used on skin and surfaces and is 100% free of alcohol, chlorine, bleach and SLS

making it compatible with all surfaces, resulting in no fading or rusting.

When used with MONO's Trolley Sanitiser Station it creates an automatic hyrisphere around the trolley to provide secure, lasting protection, especially in high touch point areas. It leaves residual protection which is enhanced with regular application.

## Specifications:

Overall Height(mm)	1,284
Internal Height(mm)	1,119
Overall Width(mm)	1,485
Internal Width(mm)	850
Depth(mm)	600
Floor Fixing	Floor bolts to secure
Chemical Usage	5L per 4,300 trolleys*
Atomising Nozzles	4
PVC Mist Curtains	2
Trolley Bumper Bars	Yes
Magic-eye Detector	Yes
Hand Sanitiser Dispenser	Integrated
Locked Solution Cabinets	Yes
Electrics	Single Phase, 230V, 780W, 13A
