# 1.0 INTRODUCTION

---

The **MONO MX** rotary rack oven is a compact electrically heated oven with a computerized touch control panel. The oven is designed to accommodate a single rotating rack of up to eighteen trays capacity.

Ecotouch ovens are supplied with **TOUCH** displays for user-friendly control panels. This can show pictures of product types or program numbers that have been set by the user. When not being used, the screen can show your company logo. A voice prompt facility is also available for the basic instructions like “Bake over”.

The oven is of stainless steel construction, with easily cleaned interior and exterior surfaces and smart appearance.

The fan and rack rotator have generously rated, totally enclosed, motors and a sealed for life gearbox.

The high-speed fan, heating and steam systems give efficient air circulation to produce a professional bake across a range of products via a diagonal cross-flow system with efficient air circulation.

The steam system is connected to a standard water supply.

*(Pumps are available for very low pressure areas).*

Steam is generated within the oven chamber by means of a multi-point, water injection cascade. The amount of steam to be generated is controlled by means of a programmable time period on the control panel. No drain is required for the baking and steaming process of this oven.

Programmed damper control is provided as part of the programming controls.

The oven door incorporates a large glass panel and LED lights to afford an excellent view of the baking progress. To optimise bakery layout the main oven door can be hinged on either side; even if oven is relocated after initial installation.

## 2.0 OVERALL DIMENSIONS

---

- 1. FLUE GAS CONNECTION  
(BLANK PLATE ON ELECTRIC OVENS)
- 2. WATER CONNECTION      $\frac{3}{4}$ " BSP
- 3. POWER CABLE INLET
- 4. STEAM DIVERTER BOX CONNECTION   10mm DIA.

MAX. RACK DIAGONAL = 885mm  
DOOR SWING RADIUS = 790mm

## 3.0 SPECIFICATIONS

---

**Designation:** Oven

### Electrical

Power supply: 415V 3ph + N + E  
50Hz 47kW – 65amps per phase

Low power version

415V 3ph + N + E

50Hz 38kW – 53amps per phase

Connection point: See section - *Dimensions*

### Mechanical

Width/depth/height: See section - *Dimensions*

Maximum tray size: 762mm (30") x 457mm (18")

Air circulation: Radial fan driven by electric powered motor – 1.5kW

Steam system: Mass energy storage, no drain

Rack rotation: Electric powered motor/gearbox (0.18kW) driven via belt drive  
Hanger inside baking chamber

No materials containing asbestos have used in the construction of this oven.

### Heating system

Fuel: electricity

output,: 45kW (15 elements of 3kW)

Low power version - 36kW (12 elements of 3kW)

### Flue system

Flue connection: See section - *Dimensions*

### Rack rotation

The rack hanger is driven by an electric motor situated on the mid left-hand side of the oven roof. Power transmission to the rack-hanger's central drive shaft is by means of a single tensioned V-belt that affords slippage of the transmission in the event of a blockage to rack rotation.

### Air circulation system

An electrically powered radial fan re-circulates air within the oven. Heated air enters the fan at the upper left-hand side of the oven and is driven within the roof structure to the vertically orientated air door at the rear corner of the baking chamber.

Adjustable openings in the air door allow the amount of air entering the baking chamber at various heights to be adjusted to get the optimum baking result.

The air door openings are set at the factory and should not require resetting. The factory settings are given in section – *Setting the Air Slots* for reference. Should these factory setting fail to give a satisfactory baking performance then instructions for adjusting the openings are given.

### **Steam system**

The steam generating system is completely contained within the oven and situated at its left hand side in the lowermost region of the air duct, outside of the baking chamber. Only cold water, at a pressure of 4 – 6 bar (58 – 87 PSI), needs to be connected to the oven for the purpose of steam generation.

From a cold oven start the steam system will typically require 20 minutes to accumulate sufficient energy to produce satisfactory steaming performance; and during repeated baking cycles it automatically re-energises itself during the bake cycle. No drain is required for the steam system.

Under normal conditions of use this oven is not considered a pressure vessel.

### **Heating System**

Heat is transferred to the baking chamber through the interaction of re-circulating air passing over the hot surfaces of the heating elements.

### **Electrical connection**

The oven is fitted with built-in automatic fuses, situated in the uppermost region of the compartment behind the control door. The fuses are marked and can be accessed when the control door is opened.

### **Ventilation**

To ensure the correct operation of the roof-mounted components the ambient temperature should not exceed 50°C. The oven requires zero clearance on left, right and rear vertical faces for operation or maintenance.

### **Extraction**

Airborne emissions from the baking process, such as steam, oil, etc., will be discharged from the overpressure duct and the damper duct; both situated at roof level towards the front of the oven. Discharge will also occur from the front of the oven upon opening the door at the end of a bake.

See also section – *Installation*.

### **Noise**

Emission of airborne noise is less than 70dB

## 4.0 SAFETY

***In the interest of safety and efficient operation of the oven, it is essential that this manual should be made available to the operator before work is commenced.  
The following points should be observed and followed at all times.***

- 1 This oven is designed for baking bread, confectionery and savoury bakery products. Do not use it for other items without consulting with **MONO**.
2. It is essential for proper and safe operation of the oven that users are familiar with its operation and use.  
*Read the instructions provided in this document before use.*
3. This appliance is not intended for residential use.
4. This appliance is not intended for outdoor use.
5. Unauthorised service or repairs to these ovens may cause personal injury or damage to the equipment, which may invalidate warranty agreements.
6. Only qualified engineers appointed by MONO EQUIPMENT should carry out service and repairs to this equipment. Electrical panels and electrical distributor boxes should not be opened until the main electrical supply to the oven has been turned off.
7. All connections to this oven must be made in accordance with the statutory and technical regulations of the country in which the oven is installed.
8. When work is being carried out inside the oven, the electrical mains isolator must be turned off and locked. The baking compartment door should be wedged open and a suitable warning notice hung on the door to prevent it being accidentally closed
9. While the oven is in operation, and for some time after having been in operation, it is dangerous to touch the window glass or the metal surfaces in its vicinity. The oven must be allowed to cool before any form of cleaning is started.
10. Use only **MONO** spare parts for this oven.
11. The construction of the oven must not be changed.
12. Oven gloves should be worn when moving products in or out of the oven.
13. The owner of the oven is **legally obliged to instruct staff** using the oven in its operation and in these safety regulations. The instruction manual for the oven must not be removed from the oven work area.

**WARNING: WHEN DOING ANY MAINTENANCE ON TOP, KEEP CLEAR OF THE RECTANGULAR FLUE PIPE TOWARDS THE FRONT RIGHT HAND SIDE OF THE ROOF. VERY HOT AIR IS EJECTED.**

14. Moving parts remain unguarded on the oven roof as this area is out of reach of the operator and therefore deemed safe. Care must be taken to avoid these motorised parts when maintenance tasks are performed.
15. Unless trays/containers for the purpose of holding the oven products are supplied with the oven by the manufacturer, it is the responsibility of the customer to ensure that the nature and surface conditions of materials likely to come into contact with food shall be such that they cannot contaminate or spoil the food.
16. Up until August 2017 the oven's main door has a safety release foot-plate on its inner side allowing the door to be opened from inside in an emergency lock-in situation.

### EMERGENCY INTERNAL-DOOR RELEASE

After August 2017 the oven's main door has a safety release handle on its inner side allowing the door to be opened from inside in an emergency lock-in situation.

## 5.0 INSTALLATION

---

- 1 The **MONO MXE** oven is designed to operate as a freestanding unit, and must not be bolted down or fixed to the floor in any way.
- 2 The concrete floor beneath the oven must be smooth, flat and clear of any obstructions, and must be at least 150mm (6") thick.
- 3 The foundation must be flush with the overall bakery floor because racks are wheeled up a ramp (supplied with the oven) into the baking chamber.
- 4 A minimum headroom clearance of 3 metres (180") between the floor and the bakery ceiling must be maintained at all times.
- 5 WATER SUPPLY  
The water supply to the oven shall be fitted with protective means against backflow in the water supply and installed according to the national regulations in force.  
Customers in hard water areas must ensure that an efficient water treatment device protects the supply to the oven. It is the customers' responsibility to install and maintain an adequate water supply to the oven, which should comply with local water regulations.

Connect to a suitable water supply, making sure that the pipes are flushed out to remove all foreign bodies i.e. flux or solder.

### NOTE

Set up of the pressure regulator should not be required as it is factory set to the optimum setting to provide the best steam during a bake.

## 7. Oven evacuation --- Canopy/Hood

It is recommended that evacuation of the oven baking chamber products is achieved with a hood covering the entire oven top and projecting beyond the front of the oven by 600mm. the extraction rate from the hood should be approximately 1700m<sup>3</sup>/h.

The customer is responsible for providing adequate levels of make-up air if an extraction hood is fitted.

## 6.0 ISOLATION

In case of an emergency, switch oven off at mains electrical isolator switch.

**NOTE:** IF WORKING ON ELECTRICAL BOX AND PANEL, ensure oven is DISCONNECTED from CONSUMER POWER SUPPLY.

**NOT ONLY OVEN ISOLATOR ABOVE, AS SOME PARTS STAY LIVE AFTER ISOLATOR SWITCH IS OPERATED**

## 7.0 CLEANING INSTRUCTIONS ---

### **Caution**

**Do not use high-pressure equipment to clean the oven.**

The oven has been designed with sealed components, which are used wherever possible. The minimum of routine cleaning is required, but it is essential that it be properly and regularly carried out.

1. Sweep out debris from the oven floor daily.
2. Clean up spillages of product on the oven floor.
3. Wipe off splashes on door window.

Do not use alkaline or abrasive detergents when cleaning the oven.

Do not use detergents on the control panel overlay – wipe with a damp cloth only.

**Note:** *Buildup of spillages may result caused by incorrectly placed racks. Also check for damage to door seals, particularly if operators are careless with rack handling.*

## 8.0 GENERAL MAINTENANCE

---

To maintain the warranty conditions, the oven must undergo service at specific intervals. Below is the service program with the given intervals:

### Every 3 months

#### **Lubrication:**

Door lock                                      Heat resistant grease

### Every 12 months

#### **Check/adjust:**

Door lock mechanism  
Internal door release mechanism  
Lighting, including cables  
Damper function  
Drive belt tension  
Limit positions  
Water connection tightness  
Solenoid valve operation  
Rack hanger bearing  
Function check  
Chamber temperature calibration

### **Lighting**

If the lighting in the door fails to operate, contact the Mono service dept. It cannot be replaced by the user.

### **SCREEN BRIGHTNESS –**

Adjusts the brightness of the viewing screen for user comfort.

### **TOUCHSCREEN SENSITIVITY –**

Adjusts the pressure required to operate the touch screen. (5 settings)

### **TEMPERATURE UNIT OF MEASURE –**

Centigrade (Celsius) or Fahrenheit

### **BAKE EXTENSION (mins) –**

Adjusts the extra time at the end of a bake for each “extra time” button touch. (10mins max)

### **BAKE START ON DOOR CLOSE –**

This will start the set bake program as soon as the door closes.

### **SLEEP MODE DELAY –**

Oven will go into sleep mode after the set minutes, providing it is up to temperature and has been through at least one bake cycle.

### **8 HOUR COUNTDOWN TIMER –**

After 8 hours the oven gives a warning and then turns off.  
Touch any button for an extra hour if required.

### **POWER LEVEL (1-4) –**

Set these as required for each level to be used.

### **CHART INTERVAL –**

Time interval in seconds that the bars show on the heat and bake time progress charts.

### **SOUNDER SELECT –**

Set as external or onboard.

### **SOUNDER TONE –**

Select a tone – Voice or Off

## **OVEN SETTINGS EXPLAINED - HIGH LEVEL**

### **OVEN TYPE –**

Set this to MX.

### **MAX. BAKE TEMPERATURE –**

Can be set up to 300C , (depending on the oven type)

### **TEMPERATURE OFFSET –**

Can be used to adjust the display to the actual temperature in the oven.

### **BAKE HYSTERISIS –**

Sets bake temperature cycling around a set point. (Above and below).

### **SLEEP FALLBACK –**

Temperature of the oven in “sleep mode” (100C is suggested).

### **SLEEP HYSTERISIS –**

Sets “sleep mode” temperature cycling around a set point. (Above and below).

### **READY ACCEPT HIGH –**

Highest temperature for the oven to display “READY”

### **READY ACCEPT LOW –**

Lowest temperature for the oven to display “READY”

### **FAN DELAY AFTER STEAM –**

Delay before fan starts after the oven has steamed. (60 seconds max)

### **LIGHT OUTPUT SOFT START –**

On/Off Some lights need this for cold start up to stop them blowing.

### **AUTO FAN CYCLE TIME (MINS) –**

Set time required.Only used in manual and multibake modes.

### **AUTO FAN DWELL TIME –**

Set time required.Only used in manual and multibake modes.

### **HEATER CONTROL –**

Contactor or solid state. Defaults to contactor. (solid state not used at the moment)

### **I/O DIAGNOSTIC –**

Displays outputs and inputs at the top of the screen to aid fault finding if needed.

## DEFAULT PASSCODES ---

**SUPERVISOR (LOW LEVEL) -- 123456**

**HIGH LEVEL -- 654321**

**MASTER -- 314159 (This is fixed)**

### **SUGGESTION**

To stop unauthorised changes to the oven setup, it is suggested that this page is removed from this manual and kept in a safe place for future reference.

If tampering could be a problem, It is a good idea to change the passcodes at regular intervals.

# 9 - 7 USING THE USB PORT

START SCREEN

Ensure the Start screen is showing

1

Insert the USB memory stick into the socket on the oven panel. (Rubber plug may have to be removed first).

2

NOTE

The USB stick will only fit in one way.  
Do not force into the socket.

Wait for the USB symbol to finish moving

3

If old firmware is found, the firmware version screen will appear.

Touch "OK" to update firmware

-Wait-

Remove USB stick

OR

Touch "CANCEL" to choose other items to update or change. (see next page)

4

Choose action you would like to do. **5**

Select the file required. **6**

When confirmation of "file loaded ok" Shows, remove the usb stick. **7**

# NOTES ON USING USB STICKS

For a USB stick to function correctly it must have the following folder in the root folder .

## **Mono**

Then into that folder add the following:

**Firmware**  
**Products**  
**Skins**  
**Sounds**  
**Start-up**

Place your recipe/product files in the “**products**” folder.

The oven will find the “**Mono**” folder automatically when the stick is plugged into the oven.  
Any stick can be used (does not have to be blank) but the Mono folder must be in the root folder.

The most used folders are explained below:

## **SKINS**

These control the way the screen looks in different modes.

**Pictorial** is when the screen displays categories using pictures.

**Numerical** is when the screen displays program numbers.

## **STARTUP SCREENS**

This is the picture/logo you see when the oven is started.

## **PRODUCT FILES** (PROGRAM FILES)

These are the files that contain the information for baking each product e.g. bread,buns,cakes etc.

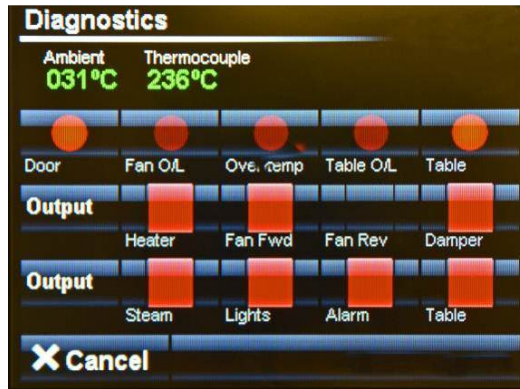

# 9 - 8      **DIAGNOSTICS**

---

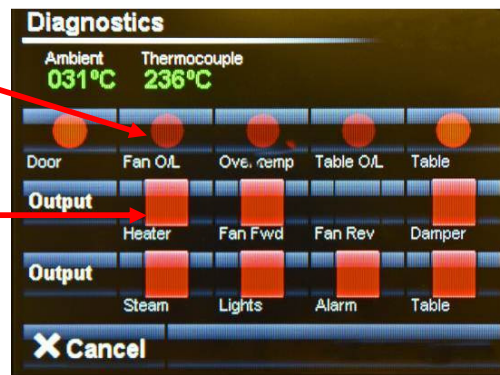

*SETTINGS SCREEN*

TOUCH "DIAGNOSTICS" AND THE FOLLOWING SCREEN WILL APPEAR.

*DIAGNOSTICS SCREEN*

INPUTS HIGHLIGHT WHEN A SIGNAL IS Received.  
e.g. DOOR OPEN

TOUCH THE REQUIRED OUTPUT AND A SIGNAL IS SENT TO THAT ITEM. THE OUTPUT BEING CHECKED IS HIGHLIGHTED WHEN ACTIVE. TO STOP THE OUTPUT, PRESS AGAIN.

# 10.0 TROUBLE SHOOTING

---

## IMPORTANT!

All repairs and adjustments to the oven must be carried out by authorised experts.  
Isolate oven before attempting repairs or removing protective panels.

Symptom	Possible cause	Probable solution
<b>The oven does not start, no fault shown on control panel</b>	The main isolator switch is off. The auxiliary fuse is tripped. The main fuse is tripped.	Switch on the isolator. Reset the fuse. Change the fuse (before the oven).
<b>Neither fan, hanger, steam or heat starts</b>	Door is not closed. Door switch is defective.	Close door. Replace door switch.
<b>Rack hanger does not rotate and no fault shown on control panel</b>	Drive belt slipping. Drive belt broken	Check belt tension. Replace belt.
<b>Oven light is not working</b>	Lighting strip is defective. Faulty wiring to light.	Replace the light strip. Repair wiring.
<b>Oven temperature fails to rise/rises slowly/cannot be maintained during baking</b>	Damper is open. Fan motor tripped. Element failure	Close damper. Reset fan trip. Call service engineer.
<b>Little or no steam</b>	Water mains disconnected or closed. Water spreader tube blocked. Filter in water line blocked. Solenoid valve defective.	Connect water supply or open supply valve. Clean/unblock spreader tube.  Clean filter.  Replace solenoid valve.
<b>Oven bakes unevenly</b>	Air slots not adjusted correctly.  Fan motor running in the wrong direction.	Adjust air slots. See section <i>Adjusting air slots</i> .  Switch electrical connections. Direction of rotation is indicated by arrow adjacent to motor.

# DO NOT ATTEMPT TO MAKE ADJUSTMENTS UNLESS YOU ARE FULLY AWARE OF THE RESULTS

## Setting the air slots

The oven has an air panel situated in the rear right-hand corner of the baking chamber with adjustable slots, which are accurately set prior to leaving the factory (the factory settings are given in the diagram below). It is through these slots that heated air passes into the baking chamber to perform the baking task. However, external factors can negatively affect the baking result, such as a poorly designed baking programme or the combination of trays and products to be baked, and adjustment of the air slots may be necessary.

However, before making adjustments please consider the following:

- Make sure that differences in baking results are not due to differences in product batches;
- Make sure that the plates that determine the width of the air slot have not come loose thereby causing a change from the factory setting;
- Do not be too hasty in changing air slot settings in response to a sudden change in bake evenness as this may have been caused by other factors, such as, after maintenance of the oven, or a related fault with the oven. Any adjustments to the air slots would be unlikely to cure bake unevenness under these circumstances;
- Check that the air circulation fan's rotation is correct – especially after maintenance or replacement.

If it is considered that adjustments to the air slots are necessary, these should be made in small increments and one slot at a time. Measure the slot opening before adjustment then slacken the screw(s) associated with the slot that requires adjustment, adjust slot opening then retighten screw. Measure slot opening after adjustment is complete to confirm the desired dimension has been achieved.

## 11.0 SPARES AND SERVICE ---

- If a fault arises, please do not hesitate to contact the Customer Service Department, quoting the **machine serial number** on the silver information plate of the machine and on the front cover of this manual

All correspondence must state the details shown on the oven's identification plate.  
*This will reduce errors and time wasted during communication.*
